Gülnihal Eruslu - Professional Profile

- Gülnihal Eruslu is a third-year Information Systems Engineering student at Kocaeli University. She is expected to graduate in 2027.
- Her contact email is gulni.eruslu@gmail.com and her phone number is +90 541 554 9897.
- She maintains a professional presence on GitHub (https://github.com/gulni-hal) and LinkedIn (www.linkedin.com/in/gülnihal-eruslu-8a8869308). You can see more about Gülnihal's Projects in Github.
- Gülnihal focuses on software development, data management, and RAG-based AI integrations.
- She has a cumulative GPA of 3.12 at Kocaeli University.

Education

- Gülnihal Eruslu is a third-year Information Systems Engineering student at Kocaeli University.

Courses

- Gülnihal is currently enrolled in the **"Hesaplamalı Sosyal Bilimler" Module** at **Marmara University's "Veri Analizi" School**.
- At the "Veri Analizi" School, she conducts Python-based projects and learns NLP and network analysis techniques.

- Gülnihal is a scholar at the **Google AI and Technology Academy**, specializing in the Data Science Module since December 2025.
- Through the Google Academy, she completes advanced data science courses on Coursera.

- Gülnihal attended the **Cybersecurity Academy** where she studied TCP/IP, the OSI model, and penetration testing.

- Gülnihal is also learning 2D/3D game development and C# at the **Digital Innovation Center.**

Professional Experience

- Gülnihal completed a **mandatory summer internship** as a Full-Stack Developer at Hamle Teknoloji Grup in 2025.
- She was accepted for this internship based on her prior experience with PHP, MySQL, HTML/CSS, and JavaScript.

- During her internship, she worked on the company's Personnel Tracking System, known as PDKS.
- Her work on the PDKS involved both developing new features from scratch and improving the existing system.
- She was responsible for backend and database development using PHP and MySQL.
- She performed frontend development tasks using HTML and CSS.
- She applied a full-stack approach to contribute functionality to critical parts of the system.
- Her internship was supervised by Product Manager Alpaslan Yavuz, who can be reached at a.yavuz@hamle.com.tr. This person is her reference.

- Gülnihal worked at the Kocaeli University Faculty Dean's office through the **İşkur Youth Program**.
- During the İşkur Youth Program, Gülnihal was responsible for managing the work schedules of student employees.
- She handled technical troubleshooting and assistance for staff members whenever needed.

- Since February 2025, Gülnihal has been working part-time at the **Kocaeli University Central Library** managing circulation processes.
- She performs material lending, returning, and user registration processes using the Yordam BT Library Automation System.

Technical Projects

- Gülnihal developed **ChatCV**, a RAG-based chatbot using FastAPI, LangChain, ChromaDB and React to query her own CV.

- She created a **Travel Guide** chatbot for specifically in preparation for her own trip to Rome.
- Chatbot uses BeautifulSoup for scraping frequently referenced travel blog and Llama 3.2 for generating answers.
- The system is designed to run locally using Ollama

- Gülnihal developed a comprehensive **Social Network Analysis** application to model academic collaborations among the top 100 universities in Turkey.
- The project utilizes real-world data from URAP (University Ranking by Academic Academic Performance) to ensure accuracy.
- In this model, universities are represented as nodes, and their academic interactions or collaborations are represented as edges.
- The application was built using Python's NetworkX library for graph modeling and PyQt5 for the user interface.

- The system allows users to trigger various graph algorithms on datasets of different scales to observe system performance and results.
- It features a real-time visualization tool where users can manage nodes and edges, as well as import or export data in JSON and CSV formats.

- Gülnihal developed **Tarif Durağı**, a responsive frontend website using Bootstrap and JavaScript. You can see the website in https://gulni-hal.github.io/tarif-duragi/

- She designed and programmed a **TPS Game** in Unity using C# with three difficulty levels.

- She created a **Pomodoro Timer** desktop application using Electron, React, and Node.js with custom Figma designs.
- She personally created all the original designs in Figma and integrated custom animations using LottieFiles.
- The application allows users to easily customize timer durations beyond the standard Pomodoro technique through a user-friendly interface.
- It features personalized motivation messages

- She developed a **Site Management Automation** system using a full-stack PHP and MySQL approach. She built the frontend with HTML and CSS.
- The system features a dual-interface design: it allows site administrators to manage complex operations with admin privileges while enabling residents to track and perform site-related tasks.
- The project is designed for local environments and runs efficiently on XAMPP.

Languages

- Gülnihal is a native Turkish speaker.
- She has an intermediate-advanced proficiency level in English.
